

Hospital Management System

Database: MySQL

UI: Design as per your choice, we have less concern about design

Features:

- > Admin Login Only
- > Bed Management: Admin can create/edit/update
beds [name(string)] [example: A1, A2, B1, B2]
- > Patient Admission: Admin can admit a patient to any available beds, while admission we will take the following informations for a patient (name, mobile)
- > Due / Payment Collection for Patient : Admin can add due / payment for a patient
- > Admin Can release a patient only when his/her due balance is 0.

I know this requirement is not clear enough, so raise your concerns , this is a part of this task too 😊

Best of luck , Allah vorosa
